

- 1. Abstract class must have only abstract methods. True or false?**
- 2. Is it compulsory for a class which is declared as abstract to have at least one abstract method?**
- 3. Can we use the “abstract” keyword with constructor, Instance Initialization Block and Static Initialization Block?**
- 4. Why can final and abstract can not be used at a time?**
- 5. Can we instantiate a class which does not have even a single abstract method but declared as abstract?**
- 6. Can we declare abstract methods as private? Justify your answer?**
- 7. We can't instantiate an abstract class. Then why constructors are allowed in abstract class?**
- 8. Can we declare abstract methods as static?**
- 9. Can a class contain an abstract class as a member?**
- 10. Abstract classes can be nested. True or false?**
- 11. Can we declare abstract methods as synchronized?**
- 12. Can we declare the local inner class as abstract?**
- 13. Can abstract method declaration include throws clause?**
- 14. Can we re-assign a value to a field of interfaces?**
- 15. Can we declare an Interface with an “abstract” keyword?**

- 16. For every Interface in java, .class file will be generated after compilation. True or false?**
- 17. Can we override an interface method with visibility other than public?**
- 18. Can interfaces become local members of the methods?**
- 19. Can an interface extend a class?**
- 20. Like classes, does interfaces also extend Object class by default?**
- 21. Can interfaces have static methods?**
- 22. Can an interface have a class or another interface as it's members?**
- 23. What are marker interfaces? What is the use of marker interfaces?**
- 24. What is the use of the final keyword in java?**
- 25. Can we change the state of an object to which a final reference variable is pointing?**
- 26. What is the main difference between abstract methods and final methods?**
- 27. What is the use of final class?**
- 28. Can we change the value of an interface field? If not, why?**

- 29. Where can we initialize a final non-static global variable if it is not initialized at the time of declaration?**
- 30. What are final class, final method and final variable?**
- 31. Where can we initialize a final static global variable if it is not initialized at the time of declaration?**
- 32. Can we use non-final local variables inside a local inner class?**
- 33. Can we declare constructors as final?**
- 34. Can you create an object without using a new operator in Java?**
