

Q1

Q1.

```
class BankAccount1 {
    private String accountNumber;
    private String holderName;
    private double balance;
    BankAccount1(String accountNumber, String holderName, double balance) {
        this.accountNumber = accountNumber;
        this.holderName = holderName;
        if (balance < 0) {
            throw new IllegalArgumentException("Balance cannot be negative");
        }
        this.balance = balance;
    }
    public String getAccountNumber() {
        return accountNumber;
    }
    public String getHolderName() {
        return holderName;
    }
    public double getBalance() {
        return balance;
    }
    public void setHolderName(String holderName) {
        this.holderName = holderName;
    }
    public void setBalance(double balance) {
        if (balance < 0) {
            throw new IllegalArgumentException("Balance cannot be negative");
        }
        this.balance = balance;
    }
    public void deposit(double amt) {
        if (amt > 0) {
            balance = balance + amt;
            System.out.println("Amount deposited successfully");
        } else {
            System.out.println("Invalid amount");
        }
    }
    public void withdraw(double amt) {
        if (amt > balance) {
            System.out.println("Insufficient balance");
        } else if (amt <= 0) {
            System.out.println("Invalid amount");
        } else {
            balance = balance - amt;
            System.out.println("Withdrawal successful");
        }
    }
}
```

```

    }
    public String toString() {
        return "Account Number: " + accountNumber +
            "\nHolder Name: " + holderName +
            "\nBalance: " + balance;
    }
}

public class BankAccount {
    public static void main(String[] args) {
        BankAccount acc = new BankAccount1("12345", "Siddhi", 5000);
        acc.deposit(2000);
        acc.withdraw(1000);
        System.out.println(acc);
        try {
            acc.setBalance(-500);
        } catch (IllegalArgumentException e) {
            System.out.println(e.getMessage());
        }
    }
}

```

Q2.

```

package check1;

public class InvalidAgeException extends Exception{
    public InvalidAgeException() {

    }

}

public class DuplicateRollNoException extends Exception{
    public DuplicateRollNoException() {
        super();
    }

}

public class Student{
    int rollNo;
    String Name;
    int Age;
}

class StudentRegistration{

    public static void main(String[] args) {

    }

}

```

}
